FORGE · THEME 1 · CIVIC PULSE, DIGITAL GOVERNANCE & PUBLIC INFORMATION

Haq हक़

Your rights and schemes, in your language, with proof for every answer.

Problem 1: Multilingual Policy, Rights & Scheme Explainer

Live now: haq-civic-copilot.vercel.app

IIT Kharagpur

THE PROBLEM

Entitlements exist; access does not

Rules hide in legal PDFs

Notifications, guidelines and Acts are long and technical, written for officials rather than citizens.

Language is a wall

Most citizens and small businesses cannot read dense English or legal wording.

Eligibility is a puzzle

Income, category, land, state: every scheme has its own conditions and document list.

AI chatbots guess

Generic chatbots invent rules and amounts, and never show where an answer came from.

Who is affected: citizens, farmers, students, women and small businesses who rely on public schemes.

OUR SOLUTION

Explain, answer, decide

Explain simply

Upload a PDF or paste a link. Rights, duties and deadlines in plain words, in 12 Indian languages.

Ask anything

Answers come only from the document. If it is not there, Haq says “Not found” instead of guessing.

Eligibility agent

Describe yourself by typing or speaking. The agent checks each rule against you and builds your document checklist.

Voice and live sources

Speak your question, hear the answer. Reads live government feeds and any link you give.

Every point links to the exact words in the official source document.

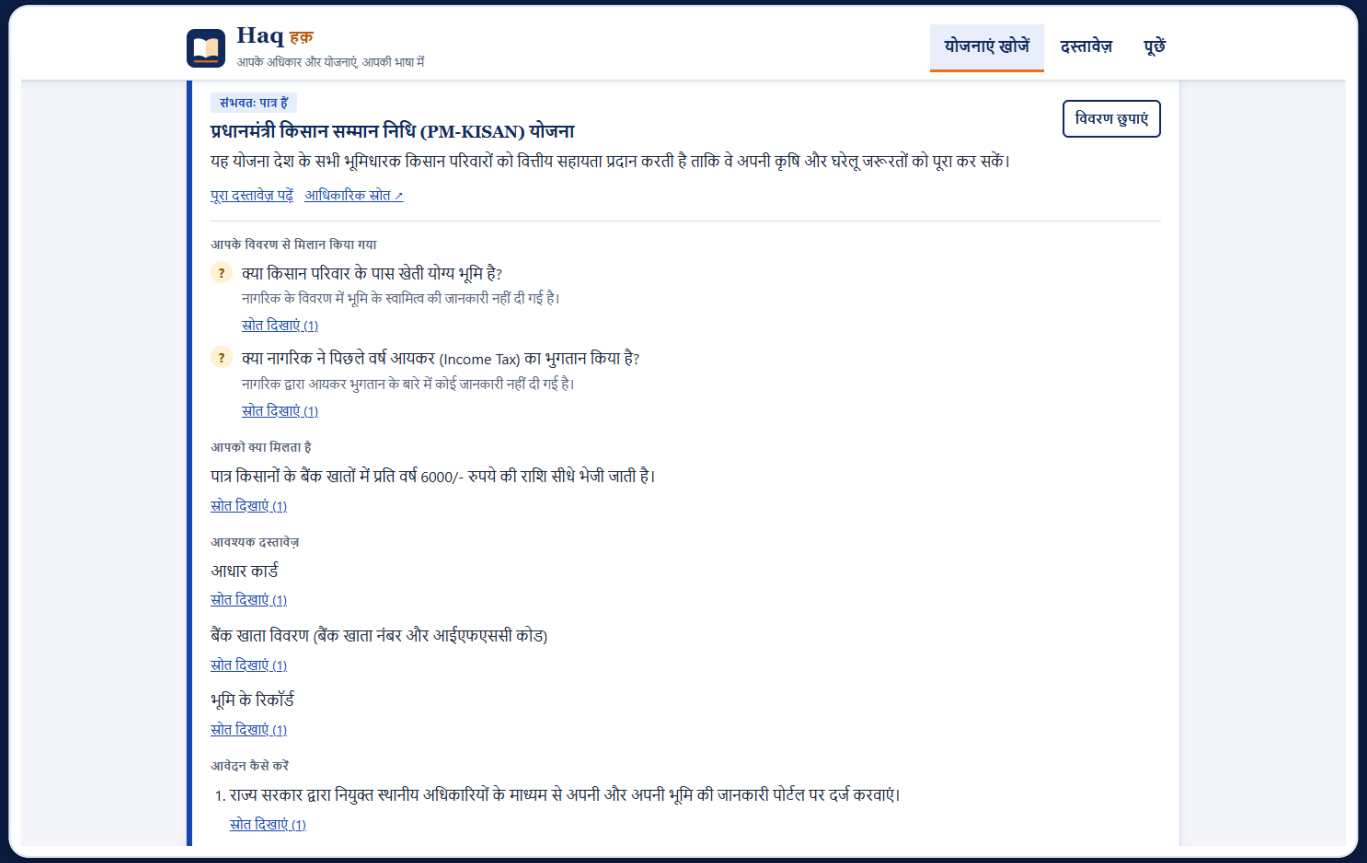

THE PRODUCT

A farmer in Bihar asks in Hindi. Haq answers in Hindi, with sources.

1. **Whole interface in the user's language**
   Screens, results and spoken audio switch together.

2. **Every line has "Show sources"**
   Opens the exact passage from the official document.

3. **Honest about unknowns**
   A "?" means the document needs a detail Haq does not have, so it asks instead of guessing.

Live site: Hindi result for a Bihar farmer (PM-KISAN)

HOW IT WORKS

Retrieval you can audit

Anti-hallucination guardrails

- Distance threshold: weak matches never reach the model
- Citations must be real retrieved passages; others are discarded
- Uncited statements are dropped or grounded against the source text
- Verdicts are recomputed from evidence, never trusted from the model

THE ELIGIBILITY AGENT

An agent that checks itself

1 Profile
Asks if details are missing

2 Plan
Writes its own search queries

3 Catalog
Fetches official scheme documents

4 Live sources
Reads feeds, picks relevant items

5 Retrieve
Finds candidate documents

6 Evaluate
Each rule: met, unmet or unknown

7 Verify
Drops claims with no source

8 Checklist
Documents to keep ready

Built for a live demo

- Invalid output is fed back for one self-correction
- Model busy: automatic fallback models
- A source down or blocked: skipped and reported
- Thin input: asks questions, never guesses

The highlighted steps are where the agent protects the user: it compares every rule, then removes anything it cannot source.

PROOF

Tested on real official documents

8/8
Answered correctly

8/8
Every answer cited

6/6
Off-topic questions refused

Small test set: 2 official documents, about 20 questions. We show it live rather than claim a benchmark.

29 live items read from MyGov, RBI and Digital India in one agent run

12 Indian languages for the interface, answers and voice

50 automated tests covering API, speech, translation and TLS

Real run: PM-KISAN guidelines imported from the official site: Rs 6,000 per year; Aadhaar, bank and land records, with sources.

RESPONSIBLE AI AND LIMITS

Honest by design

What we guarantee

- Every answer shows its source passage
- “Not found” when the documents do not say
- Unknown details are asked for, not assumed

What we are open about

- Independent tool, not an official government site
- Machine translations; native-speaker review is planned
- Information, not legal advice; confirm at the official source

NEXT AND LIVE DEMO

A right is only useful if you can understand it

Roadmap

- data.gov.in and state scheme portals
- Browser agent to pre-fill application forms
- WhatsApp and phone (IVR) access for low connectivity
- Offline mode and native-speaker review of every translation

Live demo in 2 minutes

1. Import a live government item
2. Read it in Hindi, with sources
3. Ask something not in it: “Not found”
4. Speak your situation; watch the agent work
5. Get a verified verdict and checklist
